

NATIONAL PUBLIC SCHOOL, BENGALURU
REPORT ON EDUCATIONAL TRIP 2023-24
GRADE 6

The students of Grade 6 visited the University of Agriculture sciences-GKV, as part of their educational trip, on Wednesday, July 19th 2023. The trip aimed to provide students with hands-on experience and knowledge about different plant species, their characteristics, and their importance in our ecosystem.

During the trip, at the Agricultural University, the students learnt about the latest advancement in crop science and sustainable farming practices. At the sericulture facility, students had the opportunity to learn about the process of silk production, from silkworm rearing to silk extraction. They were able to observe silkworms at different stages of development and handle cocoons to extract silk fibres. This hands-on activity allowed students to understand the significance of silk in history and its importance in the textile industry.

During the guided botanical garden tour led by a botanist, the students were introduced to a variety of plant species and learnt to identify them based on their physical characteristics. They were also given the opportunity to explore the garden and observe the plants in their natural habitat. This activity fostered an appreciation for biodiversity and the importance of preserving natural ecosystems.

The trip was a great success, as students were able to observe and learn about different plant species in a real-life setting. The interactive sessions helped students understand the importance of plants in our ecosystem and how they can contribute to mitigating climate change. The trip was an enriching experience for the students and helped them develop a deeper appreciation for the natural world.
