## ROMAN NUMERALS

Activity: Roman Numerals with Fake Currency

"Learning becomes meaningful when children can see, touch, and connect numbers with real-life experiences."

Students explored Roman numerals through a fun and interactive activity using fake currency values like 1, 5, 10, 50, 100, 500, and 1000. By combining these values like currency notes, they learned how Roman numerals are formed and represented. The activity helped students understand numbers in an engaging and practical way. Working in groups encouraged collaboration, communication, critical thinking, and problem-solving among students. It also strengthened numeracy skills and developed basic financial awareness through play-based learning.
