

## *Report on Grade 7 D Class Assembly*

*“Soil and plants are friends that benefit from constant care and attention to the details.”*

*World Soil Day, observed annually on December 5th, serves as both a celebration and a call for action for one of humanity’s most fundamental and yet often over looked resource: soil.*

*The students of Grade 7 D presented their assembly in the second week of December 2025, celebrating **WORLD SOIL DAY** with the theme, “Healthy Soils for Healthy Cities,” highlighting the critical role of urban soil in sustaining food security, climate resilience, and human well-being. The students presented a song on the importance of the day. The dance which was presented emphasised the need of saving soil in this urbanizing era and measures to prevent it. A skit, highlighted the urgent need of saving top soil in and around metropolitan cities.*

*Overall, the assembly presentation reminded the responsibilities of every individual as green ambassadors, in protecting soil.*
