

# NATIONAL PUBLIC SCHOOL

KENGERI, BENGALURU

On 20<sup>th</sup> October, 2016 students of Grade: VI presented class activity program on the topic

## **'Pollution & Conservation of Natural Resources'**

Conservation is an ethic of resource use, allocation and protection. Its primary focus is upon maintaining the health of natural world, its habitats and biological diversity. This was well illustrated through a skit. Students represented various elements of nature like air, sun, ocean, volcano, trees, birds etc. The process of air pollution and its adverse effects were un-curtained in the show.

Human greed and extra need has resulted in deforestation. This was depicted through a dance-drama. It was an interesting moment for the audience as it narrated the story of a small girl **Lali** and her love for the tree, and her imperishable agony with its destruction, it touched every one's heart.

This was followed by the mime show which displayed the conscious effort by the students to conserve trees through Chipko Movement Act.

All life on earth, be it humans, animals or plants, is the product of millions of years of evolution. Therefore, we need to learn to co-exist with the species in perfect harmony and take active steps to ensure their survival. Later it was summarized to the audience.

Finally the programme came to an end with the principal's address which conveyed the message to the students that **Conserving nature should not remain as a cultural event instead it must be the theme of our life to practice in everyday life.**
