

# REPORT ON COLORS' DAY

**“The purest and most thoughtful minds are those...,  
which love colors the most....”**

Colors lay a solid foundation for the aesthetic appreciation and application of colors symbolically. To enrich the holistic development of children, we have celebrated the colors day on 13<sup>th</sup> and 14<sup>th</sup> of July 2017 , with the theme “ **My Big Rainbow**”.

School indoor play area was decorated with primary and secondary colors toys and attractive objects brought by the children, on different counters according to the color code. Children from KG and MONT spoke about the significance of their group color and showcased their talent in front of their peer group.

All the students visited different color stalls and observed toys/objects displayed with lot of interest and enthusiasm. They were curious and inquisitive to stick seven different color papers on the Big Rainbow cut out as a group activity.

Later, this Big Colorful Rainbow was mounted and children were excited to participate in the celebration and sang rainbow songs.

Colors day was not only an enjoyable moment for the children but also a milestone in a child's cognitive process and is often part of early screening for development and educational admittance.
